

Gunnebo SafeRecycling TCR7

A profitable, efficient frontline solution
for fast, secure cash processing

GUNNEBO[®]

Drive fast and efficient cash processing, while making your branch a safer place to work.

The TCR7 offers full-service automated note recycling to increase security, efficiencies and cost control in your branch operations. Adapted to under-counter installation, it provides an efficient frontline cash management solution for fast and secure banknote processing.

Using a cassette-based intelligent system, notes are instantly registered, counted, deposited, stored and dispensed at the point of each transaction. No more manual counting, dual controls, cash drawer limits, or trips back and forth to the main vault.

For added security, the TCR7 detects and rejects counterfeit notes back to the teller for evaluation.

The intelligent cassette-based technology provides an optional escrow function. The cash is securely stored in multiple cassettes. If the teller needs to reverse a deposit transaction, the same value that was deposited is dispensed back to the customer.

Creating a more modern branch environment has now become easier, thanks to the SafeRecycling TCR7. With the TCR7, you will have a simple, integrated solution that speeds cash transaction times, makes accurate deposits and stores cash in real-time. Your tellers will be happy to process cash quickly and you will be content knowing they are handling cash less and engaging customers more for stronger relationships and higher revenues.

Benefits at a glance

1

Increase revenue and cash flow

2

Eliminate cash handling and balancing errors

3

Mitigate risk of theft and robbery

4

Reduce amount of cash-on-hand

5

Save time with optional escrow

6

Improve the customer experience

Product Features

Ergonomic design

- Open, shutter-free cash slot for easy bill placement
- Centralized 10" touch screen provides real-time visibility of cash balances and service information
- LED indicator lights allow multiple tellers to process cash simultaneously

Continuous feed

- Automatically count, validate, sort, dispense and store multiple banknotes
- Accelerate cash transactions at drive-up and over-the-counter

Easy maintenance

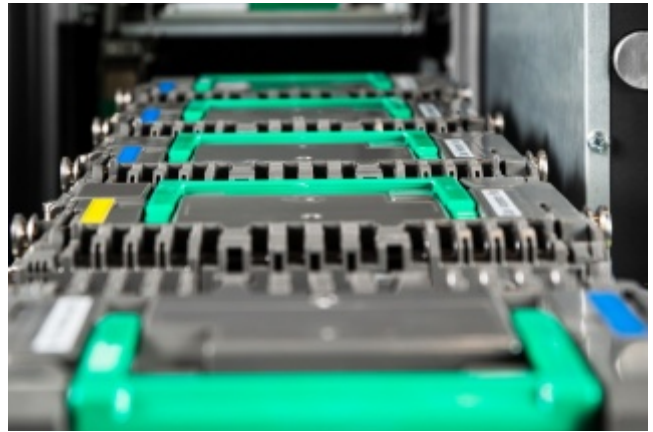

- Touch screen service instructions guide tellers in the event of a jam
- Modular design increases reliability and eases serviceability of system

Large capacity

- Process up to 3,400 notes per cassette and 2,250 notes per split cassette for a maximum of 8 different denominations
- Store and recycle cash for up to 17,000 notes into five cassettes

Note recognition technology

- Scan and recognize up to 10 notes per second of various security features
- Store the notes' serial numbers for added security

Maximum security

- Store and recycle cash into five secure cassettes
- Store cash in a UL-291 certified safe

Cassette audit

- Move bills to a transfer cassette and return them to the original cassette on a pre-programmed schedule
- Eliminate the need to manually count the content of each cassette

Enhanced integration

- Integrate cash recycling into existing teller applications for transparent use across bank operations
- Compatible with popular teller systems and integrations from CFM, Compuflex, Add-On Technologies and Benchmark Technology Group, among others

Small footprint

- Compact size and flexible design enable the unit to fit in small spaces and a wide variety of teller desk configurations
