

Gunnebo SafeRecycling R7/RS7

Increase efficiencies and security in retail operations

As cash transactions increase worldwide, retailers are increasingly looking for new ways to protect against shrinkage and robbery, while cost and time savings remain a primary concern. Increased security, productivity and operational efficiency can be achieved through a cash management solution that handles cash transactions quickly and efficiently.

Although retail cash usage is particularly strong, it comes with specific challenges for retailers:

- **Security risks:** Large amounts of cash on site leave retailers vulnerable to robbery
- **Lost time:** Cash reconciliation takes time, often at the expense of sales and customer service
- **Shrinkage:** Employee theft, shoplifting, administrative error and vendor fraud as a result of inefficient cash management procedures all contribute to retail shrinkage

- **High costs:** Back-office administrative tasks cost time and staff resources

Complete self-service cash management made easy

The SafeRecycling R7/RS7 is a self-service cash recycling system that combines depositing and dispensing capabilities in one convenient solution. You can quickly and securely fill, replenish and reconcile tills. Since notes can be withdrawn and deposited, you benefit from a closed cash cycle, resulting in less emptying and filling machines, and lower administrative costs.

The R7/RS7 is supported by proven technologies for note and coin recyclers that were used in the bank sector. It has been specifically designed for the back-office areas of big retail outlets.

GUNNEBO®

Gunnebo SafeRecycling R7/RS7

Gunnebo is a global leader in cash management solutions and services for businesses worldwide. The RS7 Lite is designed to equip retail staff with tills that can be restocked and reconciled with speed and accuracy. It is particularly suited to large supermarkets, shopping malls and entertainment venues such as casinos, arenas and stadiums.

Step 1: Filling

Select a pre-defined mix for your tills or choose from a selection of mixes. To make filling easier, coins are delivered by denomination in a bowl with a dispensing speed of up to 24 coins per second, when all 6 hoppers dispense simultaneously. Direct filling of the till is also possible.

Step 2: Refilling

Replenish certain denominations up to a pre-defined limit throughout the day. A head cashier can also perform these actions on behalf of several cashiers.

Step 3: Reconciling

Deposit bundles of up to 300 notes or the complete till with coins all at once. Up to 700 coins in 6 denominations can be counted and sorted per minute and up to 10 notes counted per second. Funds are automatically counted and authenticated, and a receipt is issued.

Step 4: Monitoring

Continuously track the real-time cash level of each safe using Gunnebo's CashControl web-based monitoring software. This software can be hosted by you or Gunnebo, and the program runned locally or centrally.

Features at a glance

- **Operation modes:** configuration as a cash-in or cash-out terminal, combined cash-in/cash-out or full recycler, or use to exchange notes for different denominations
- **Advanced user interface:** 10.1" integrated touch screen that guides the user through each transaction
- **Counterfeit rejection:** optical, ultraviolet, infrared and magnetic sensors that remove suspect and poor quality notes from circulation
- **Maximum security:** store cash in a UL-291 certified safe

Benefits

- Increased security and reduced risk of robbery as notes are stored in a certified safe
- Manual deposit slot provides reliable and secure way to separate and store notes and coins
- Optional biometric readers available
- Real-time cash monitoring via CashControl software, allowing remote tracking and reporting of cash levels
- Time savings via simplified till opening and balancing
- Cost savings through improved collection planning
- Easy-to-use system reduces time to train users
- Pre-credit* of the cash amounts deposited in the machine. Details of the cash amounts are automatically sent to the bank, allowing the retailer's account to be pre-credited.

*Pre-credit is submitted to the cooperation and authorization of the bank.

Technical Data

Coins

Sorting speed: 700 coins/minute

Sorting capacity: Up to 6 hoppers

Coin capacity: 10,700 coins+overflow of up to 10,000 coins

Dispensing speed: Up to 24 coins/second simultaneously

Coin dispensing: Coins are sorted by denomination into separate coin bowls and stored in a lockable drawer

Notes

Counting speed: Up to 10 notes/second

Note bundle: Up to 300 notes/deposit (multiple deposits) continuous feed

Recycling capacity: Up to 8 denominations

Banknote capacity: 5 cassettes between 2,250-3,400 notes each, up to 17,000 notes

Availability: 24/7 self-service

Operation: Freestanding

Dimensions: 49.2 x 36.3 x 36 inches (HxWxD)

Weight: 1,525 lbs. (empty)

Power supply: 120V, 60Hz
